

BATTERY BACK UP PACK

The Robowatch Battery Pack has been designed to provide both our standard IP CCTV system & our IP CCTV Sentry Tower with power during site closures.

This unit is designed to power the systems for up to five days before requiring a charge from a 110v source.

Used in conjunction with our Robowatch IP CCTV or our IP Sentry Tower, our systems will record 24 hours a day recording up to 30 days. Live monitoring of the CCTV system is carried out as per customer specification and cameras can be viewed via our viewing app on smart devices.

Robowatch have been the market leader in CCTV security since 1998. Armed with our state of the art IP CCTV surveillance systems, our systems pick up any unwanted intruders and immediately transmit live footage to our control room where our alarm receiving operatives will take the appropriate actions.

- ✓ Used in conjunction with IP CCTV systems & Sentry Towers
